Empower Your Field

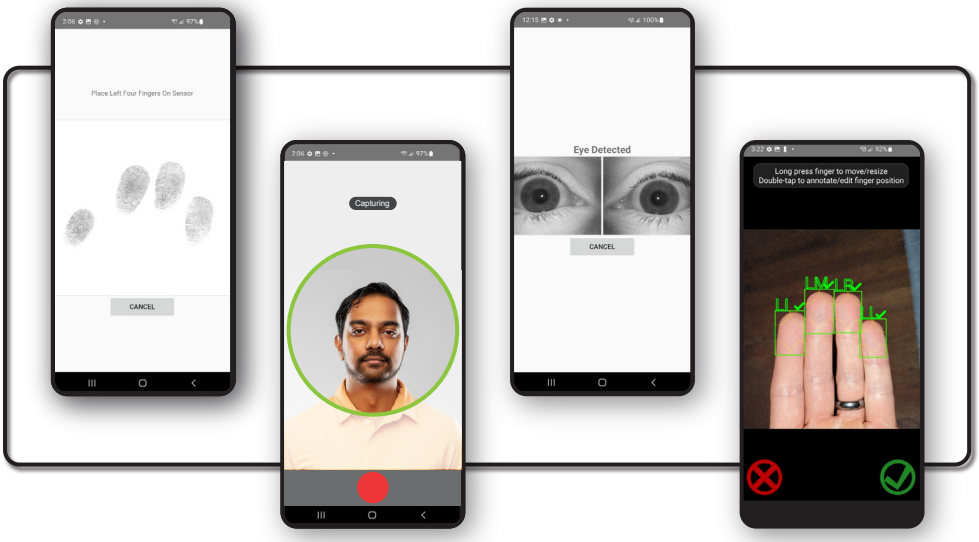

IBX for Law Enforcement Officers

IBX Mobile Software Solutions empower officers in the field to capture subject biometrics, investigate incidents, and identify individuals.

Police ministries and bureaus must enforce jurisdictional laws. They face challenges in capturing and managing biometric data across multiple systems. Integrated Biometrics' (IB) IBX software captures fingerprints, faces, and irises using IB devices or a phone's camera, enabling mobile-ready biometric collection. IBX submits data to national or regional systems, supporting:

- **Criminal & Civil Investigations:** Aids investigations, identifies missing/unidentified persons, and handles deceased individuals with specialized sensors
- **Drug Trafficking:** Searches regional, national, and international systems for suspects in domestic and international channels
- **Pre-Booking Suspects:** Enables AFIS/ABIS searches for immediate results in the field before booking
- **Immigration Violations:** Integrates with border agency databases to identify individuals at borders, in border zones, in the interior, or during transport

Capabilities

Supported Capture Methods

- All IB scanners – rolled, slap and palm prints
- Smartphone camera face and fingerprint contactless capture
- Dual iris capture

Supported Databases (with Authorized Access)

- National and regional law enforcement AFIS/ABIS
- National border, defence, and intelligence AFIS/ABIS
- National and regional jail/prison systems
- On-device ABIS & Watchlist (synced with IBX devices)

Supported Functions

- Flat print criminal records search
- Miscellaneous applicant
- Criminal applicant
- Rapid local watchlist search
- Access control lists
- Face match from video
- Long-range face match
- Unknown (mark/latent) Fingerprint Capture

Specifications

Runs on Android phones with:

- ARM CPU (1.0GHz+)
- 512MB+ RAM
- Android 9+
- 500MB+ storage (more for large watchlists/ABIS)
